A TOTALLY NEW CONCEPT IN SELF CONTAINED MOBILE SANITATION

The Monomatic sanitation system is a self contained, electrically operated, recirculating, flushing toilet. It operates on the proven principles developed by Monogram Industries in the manufacture of original equipment for Douglas DC8 and Boeing 707 jet airliners flying throughout the world.

It provides approximately 80 usages with only 4 gallons of water and operates independently of holding tanks, water supply tanks, plumbing and venting. Model A or W may be connected to a holding tank to extend the capacity of self-containment beyond 80 usages.

MONOMATIC SANITATION SYSTEM

INSTALLATION, OPERATION AND SERVICE INSTRUCTIONS

TWO MODELS AVAILABLE FOR RECREATIONAL VEHICLES

Model W: Connects directly to water supply for rinsing and filling. Complete with factory-installed rinsing and filling tube, water inlet fitting, anti-siphon vacuum breaker, and shut-off valve.

Both Models A & W Include Factory Installed (Above Floor) Drain Valve.
